

Web Application Development I

Building Static Webpages using HTML

*"If you think you can, you can."
- Henry Ford*

Overview

- Objective
 - To read and modify HTML code
- Content
 - Common HTML Tags
- After this module, you should be able to
 - Create and modify HTML pages

HTML

- Uses markup tag elements that tell the Web browser how to present the information.
- Each tag will appear as letters or words between a < (less than sign) and a > (greater than sign).
- Most tags come in pairs

<!DOCTYPE html>

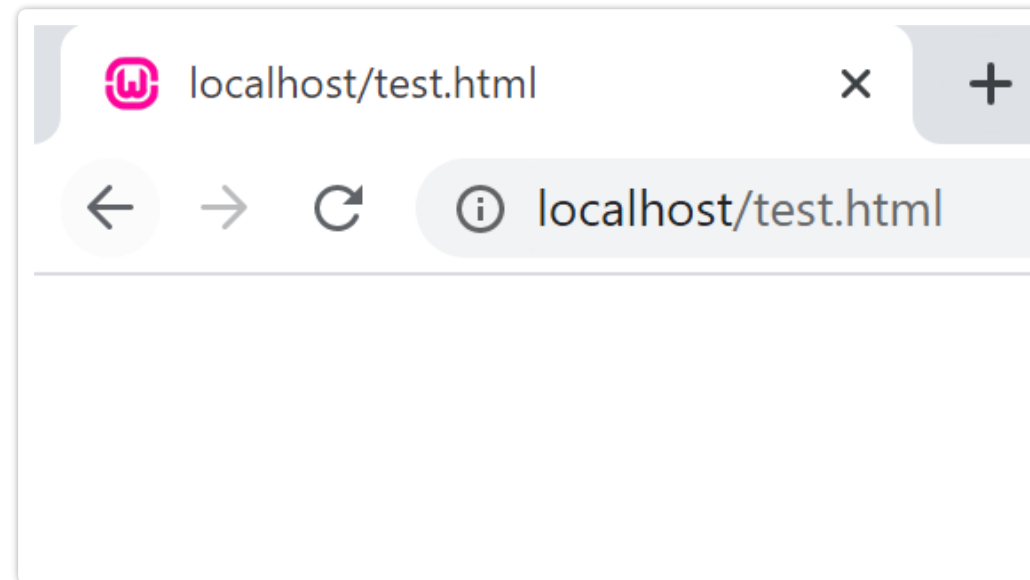

- Inform the web browser that the document is an HTML version 5 (HTML5) file
- Must be the first line of an HTML file

HTML Tag

- Indicates to the Web browser that this is the beginning of an HTML document

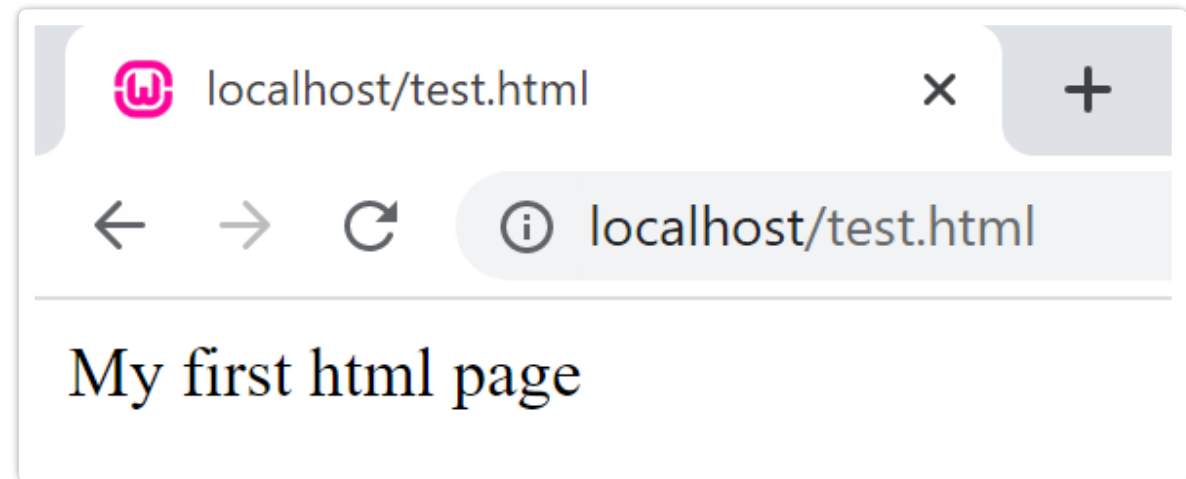

```
<!DOCTYPE html>  
<html></html>
```

Body Tag

- Indicates to the Web browser that this is the beginning of the Web page content
- Everything you want to say and see on your page will follow this tag.

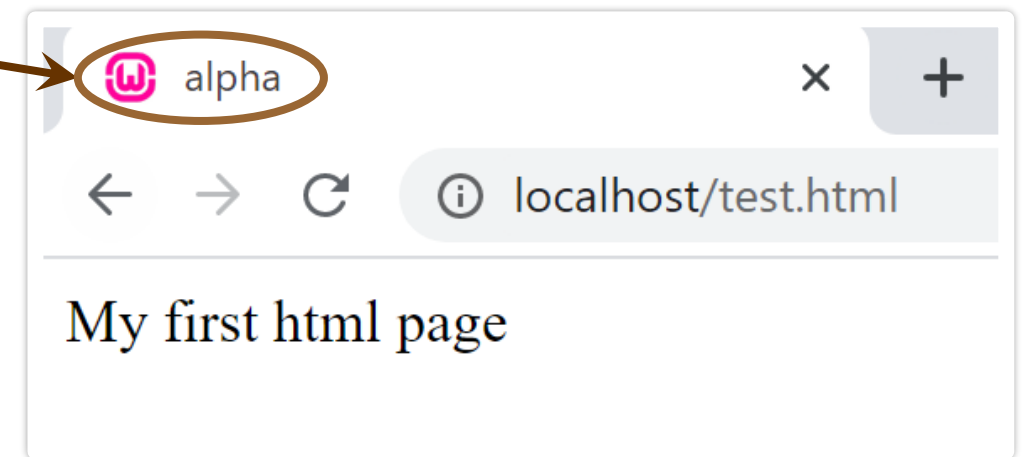

```
<!DOCTYPE html>
<html>
  <body>
    My first html page
  </body>
</html>
```

Head & Title Tag

- `<head>`: tells the Web browser that this is the header for the page
- `<title>`: tells the Web browser that this is the title of the page

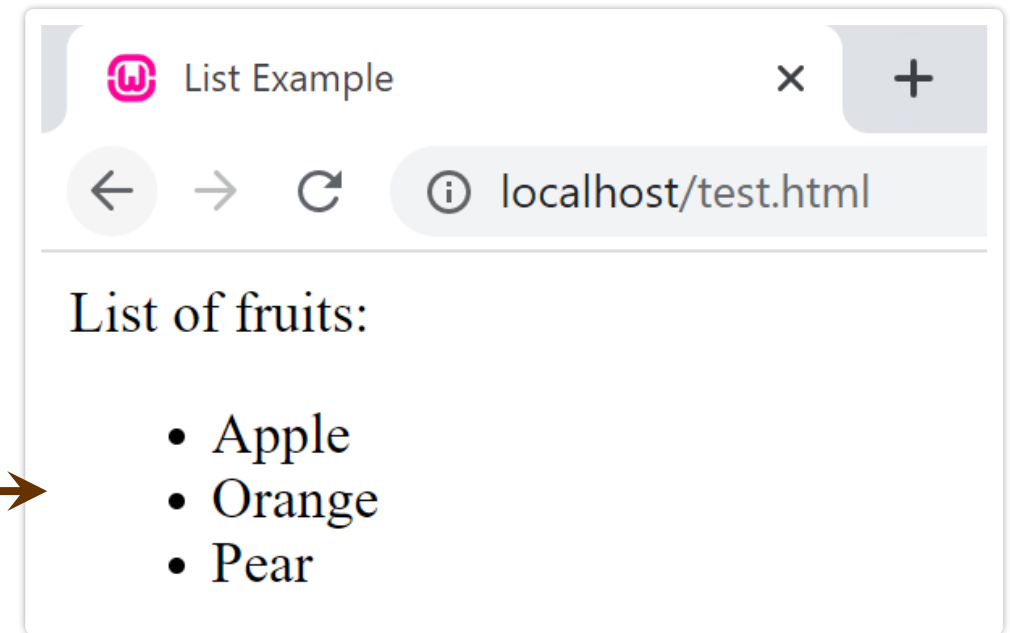

```
<!DOCTYPE html>
<html>
  <head><title>alpha</title></head>
  <body>My first html page</body>
</html>
```

Un-ordered List

- ``: **bulleted** list
- ``: an item in a list

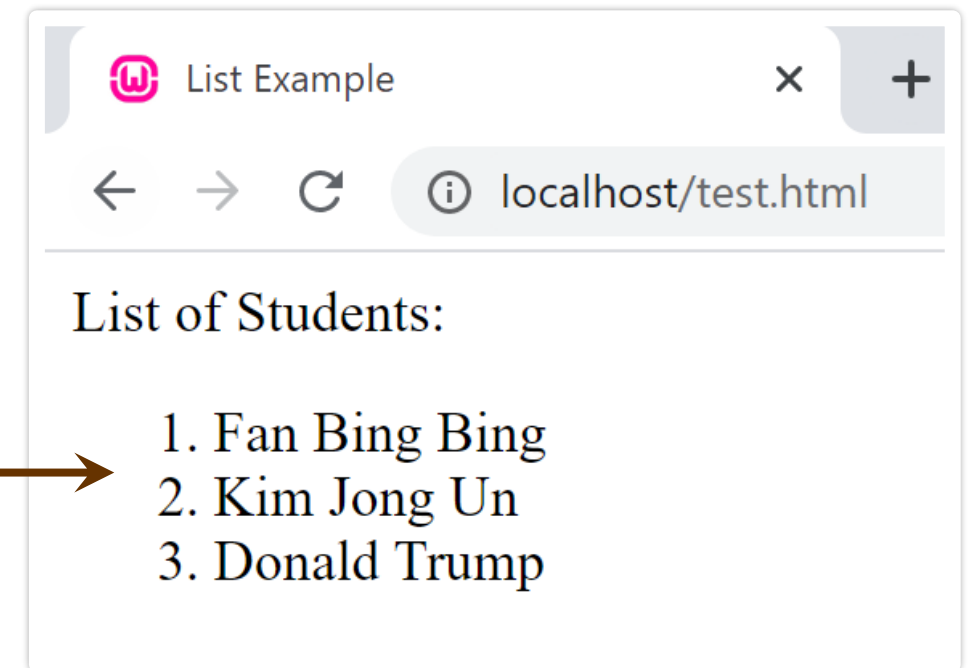

```
<!DOCTYPE html>
<html>
  <head><title>List Example</title></head>
  <body>List of fruits:
    <ul>
      <li>Apple</li>
      <li>Orange</li>
      <li>Pear</li>
    </ul>
  </body>
</html>
```

Ordered List

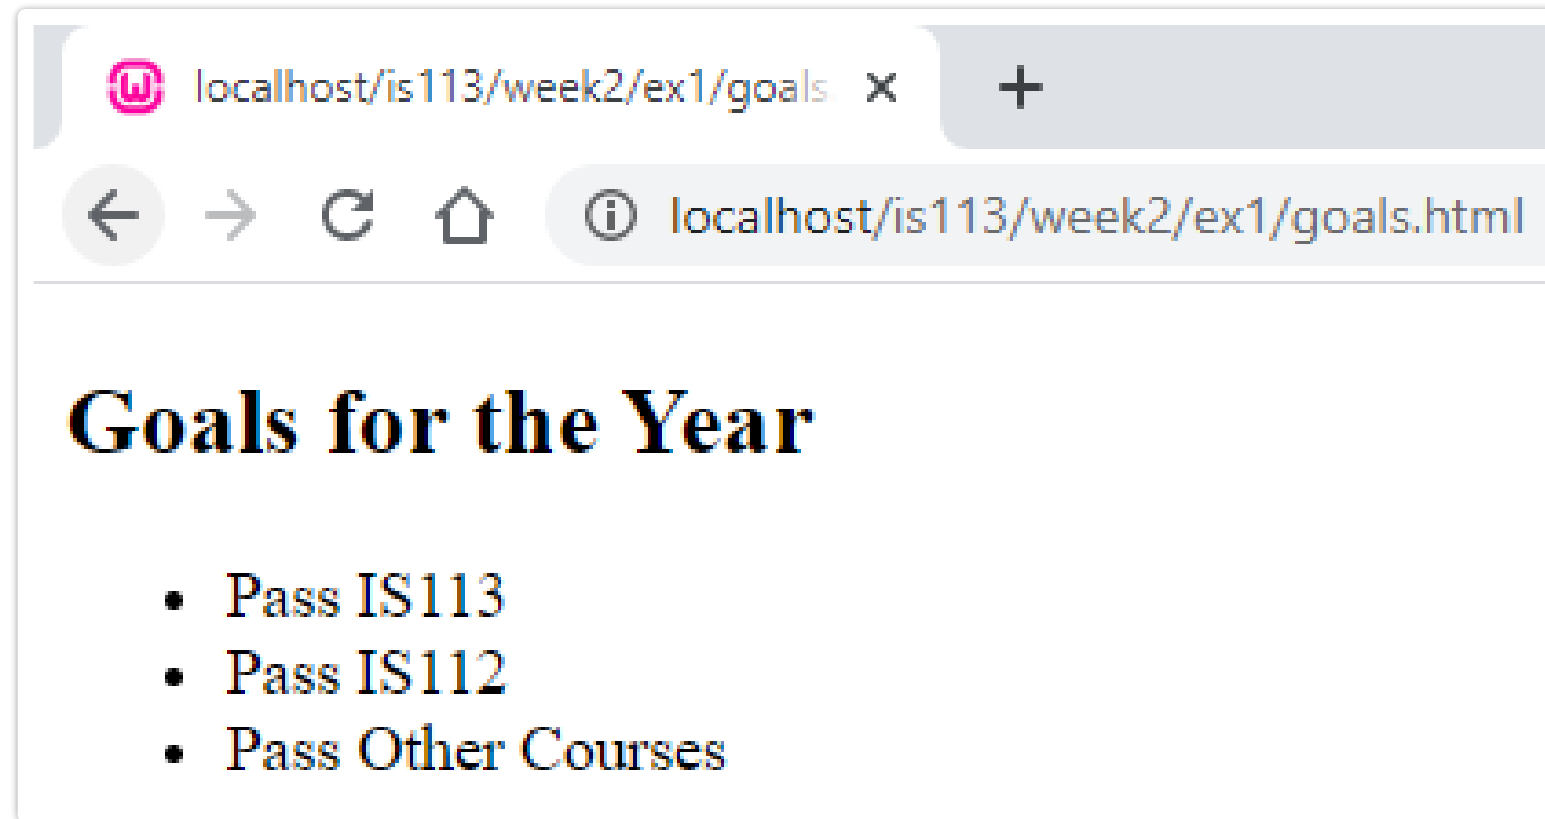

- ``: **numbered** list
- ``: an item in a list

```
<!DOCTYPE html>
<html>
  <head><title>List
Example</title></head>
  <body>List of Students:
    <ol>
      <li>Fan Bing Bing</li>
      <li>Kim Jong Un</li>
      <li>Donald Trump</li>
    </ol>
  </body>
</html>
```

Exercise 1: List

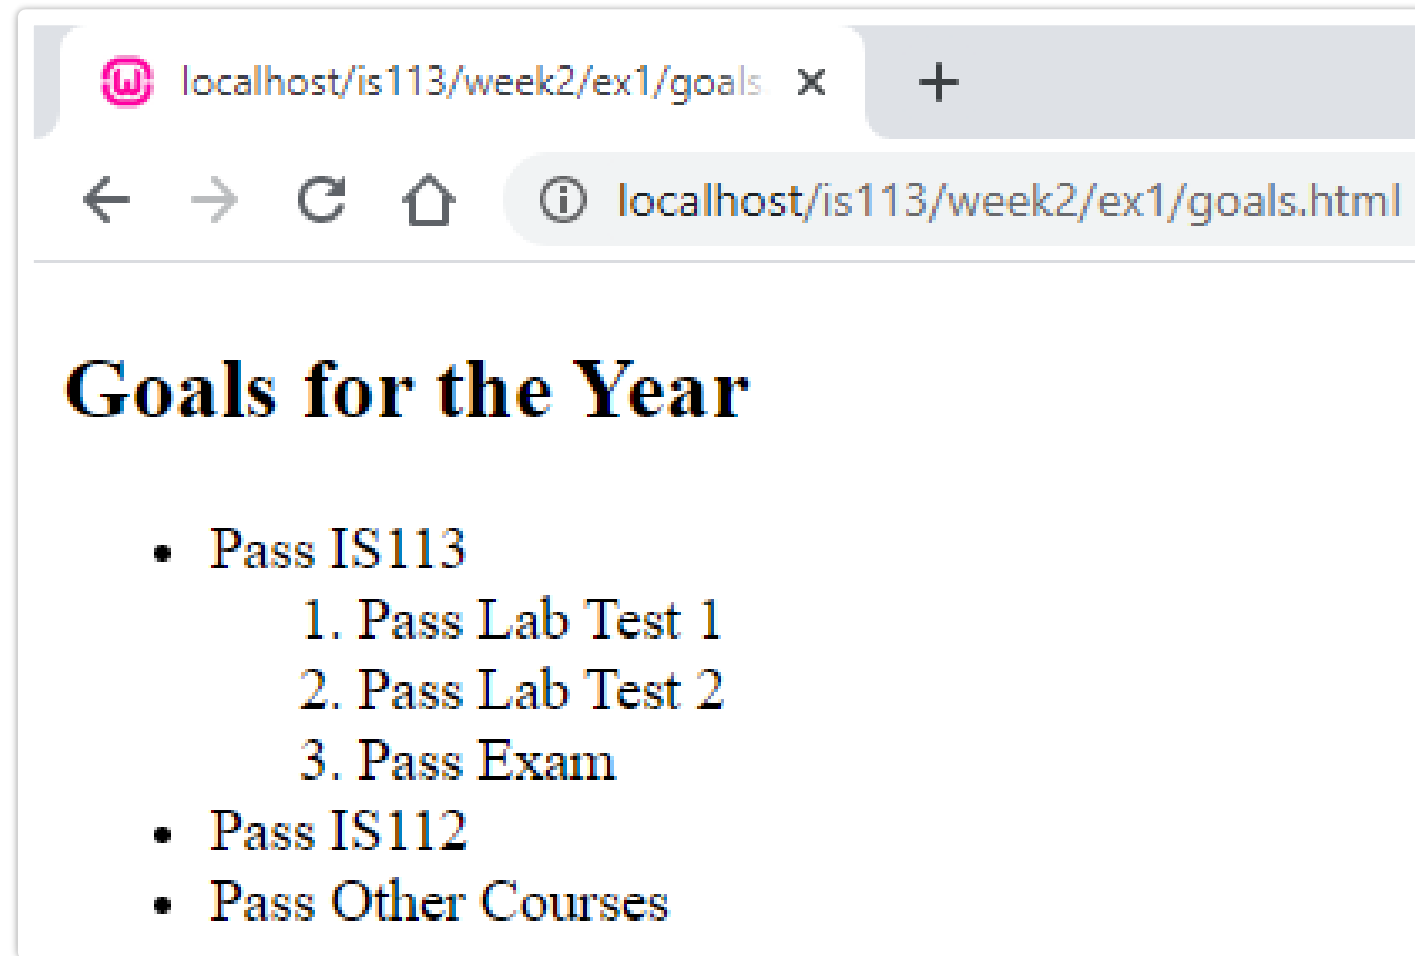

- Create `goals.html` such that the following will be displayed:

Hint: Explore by yourself the use of `<h2>`

Exercise 1: List

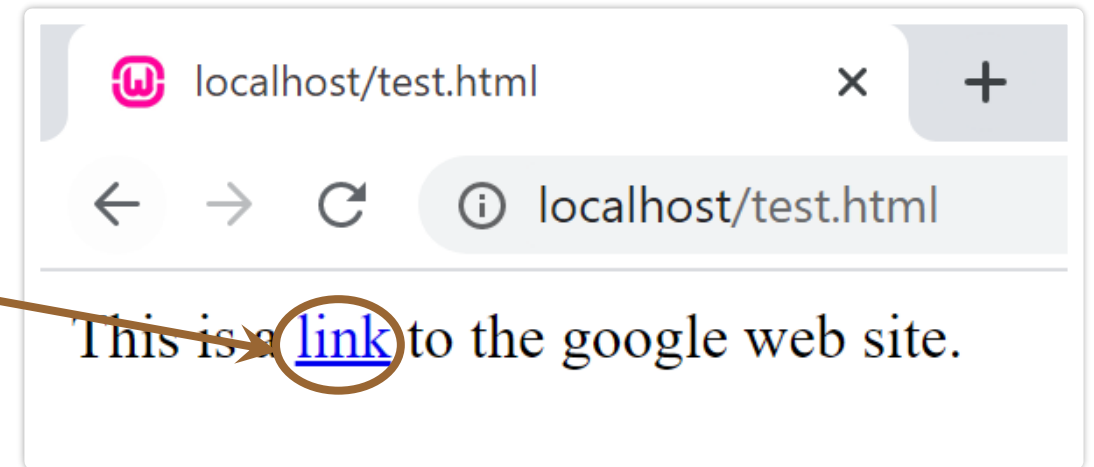

- Modify `goals.html` to produce the following output:

Anchor Tag

- Creates a link to another page
- Use the *href* attribute

```
<!DOCTYPE html>
<html>
  <body>
    This is a
    <a href="http://www.google.com">link</a>
    to the google web site.
  </body>
</html>
```

Anchor Tag (Relative Link)

- index.html -

```
<!DOCTYPE html>
<html>
  <head>
    <title>Index Page</title>
  </head>
  <body>
    <a href="/is113/lecture1.html">
      Lecture 1
    </a>
  </body>
</html>
```

A dot stands for
the current
directory

Anchor Tag (Relative Link)

- project.html -

```
<!DOCTYPE html>
<html>
  <head>
    <title>Index Page</title>
  </head>
  <body>
    <a href=".. /is113/lecture1.html">
      Lecture 1
    </a>
  </body>
</html>
```

Two dots stand
for the parent
directory

Anchor Tag (Root – Absolute - Link)

- How about this?

- **project.html** -

```

<!DOCTYPE html>
<html>
  <head>
    <title>Index Page</title>
  </head>
  <body>
    <a href="/is113/lecture1.html">
      Lecture 1
    </a>
  </body>
</html>
  
```

A slash means starting from the Document Root (i.e., www) directory

Anchor Tag (Root – Absolute - Link)

- How about this?

- **project.html** -

```
<!DOCTYPE html>
<html>
  <head>
    <title>Index Page</title>
  </head>
  <body>
    <a href="is113/lecture1.html">
      Lecture 1
    </a>
  </body>
</html>
```

What if it is
without a slash?

Anchor Tag

- How about this?

- **project.html** -

```
<!DOCTYPE html>
<html>
  <head>
    <title>Index Page</title>
  </head>
  <body>
    <a href="is113/lecture1.html">
      Lecture 1
    </a>
  </body>
</html>
```

What if it is
without a slash?

Anchor Tag & the *id* Attribute

- Can jump directly into a specific section on a page, instead of letting the user scroll around to find what he/she is looking for

```
<!DOCTYPE html>
<html>
  <head><title>My Links Page</title></head>
  <body>
    <a href="#bottom-section">Jump to Bottom Section</a>
    <br><br><br> <br><br><br> <br><br><br>
    <br><br><br> <br><br><br> <br><br><br>
    <br><br><br> <br><br><br> <br><br><br>
    <br><br><br> <br><br><br> <br><br><br>
    <br><br><br> <br><br><br> <br><br><br>
    <a id="bottom-section">Bottom Section</a>
  </body>
</html>
```

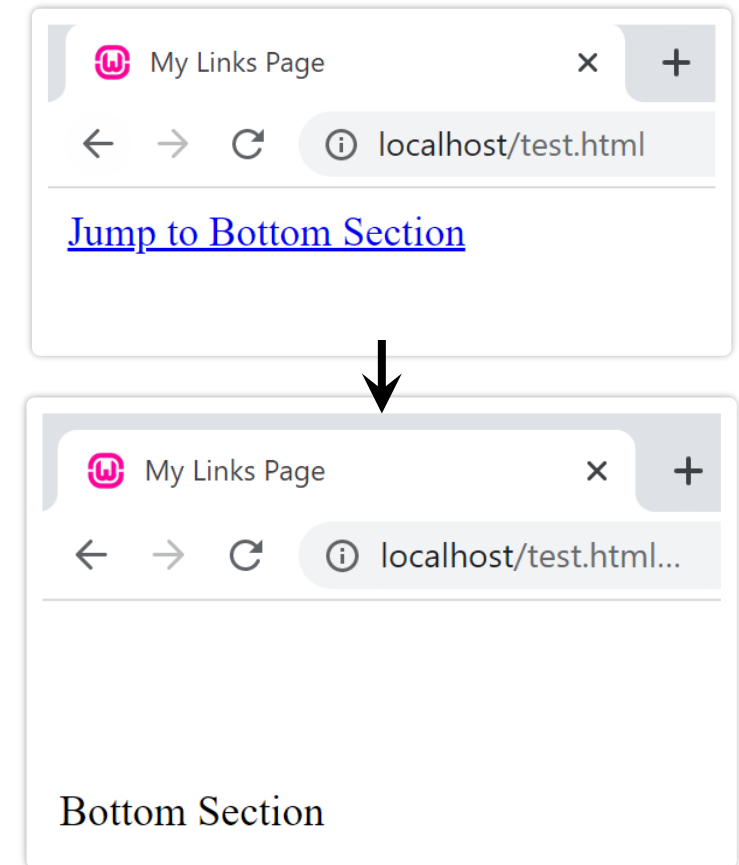

Image Tag

- To display images in your Web page

```
<!DOCTYPE html>
<html>
  <body>
    
    <br>
    Hi there.<strong>My name is Keith</strong>, and
    I am a junior in Singapore Management
    University. You might be interested to know more
    about my education, interest, life and working
    experience ... Connect with me on Facebook!
  </body>
</html>
```

Hi there. **My name is Keith**, and I am a junior in Singapore Management University. You might be interested to know more about my education, interest, life and working experience ... Connect with me on Facebook!

Exercise 2: Anchor and Image

SCIS PET ADOPTION DRIVE UPDATES

Month of January 2018

Dogs for Adoption , [MAX](#) , [Cotton](#)

Name: MAX
Breed: Golden Retriever
Age: 4 months

Name: Cotton
Breed: Japanese Spitz
Age: 2 yrs old

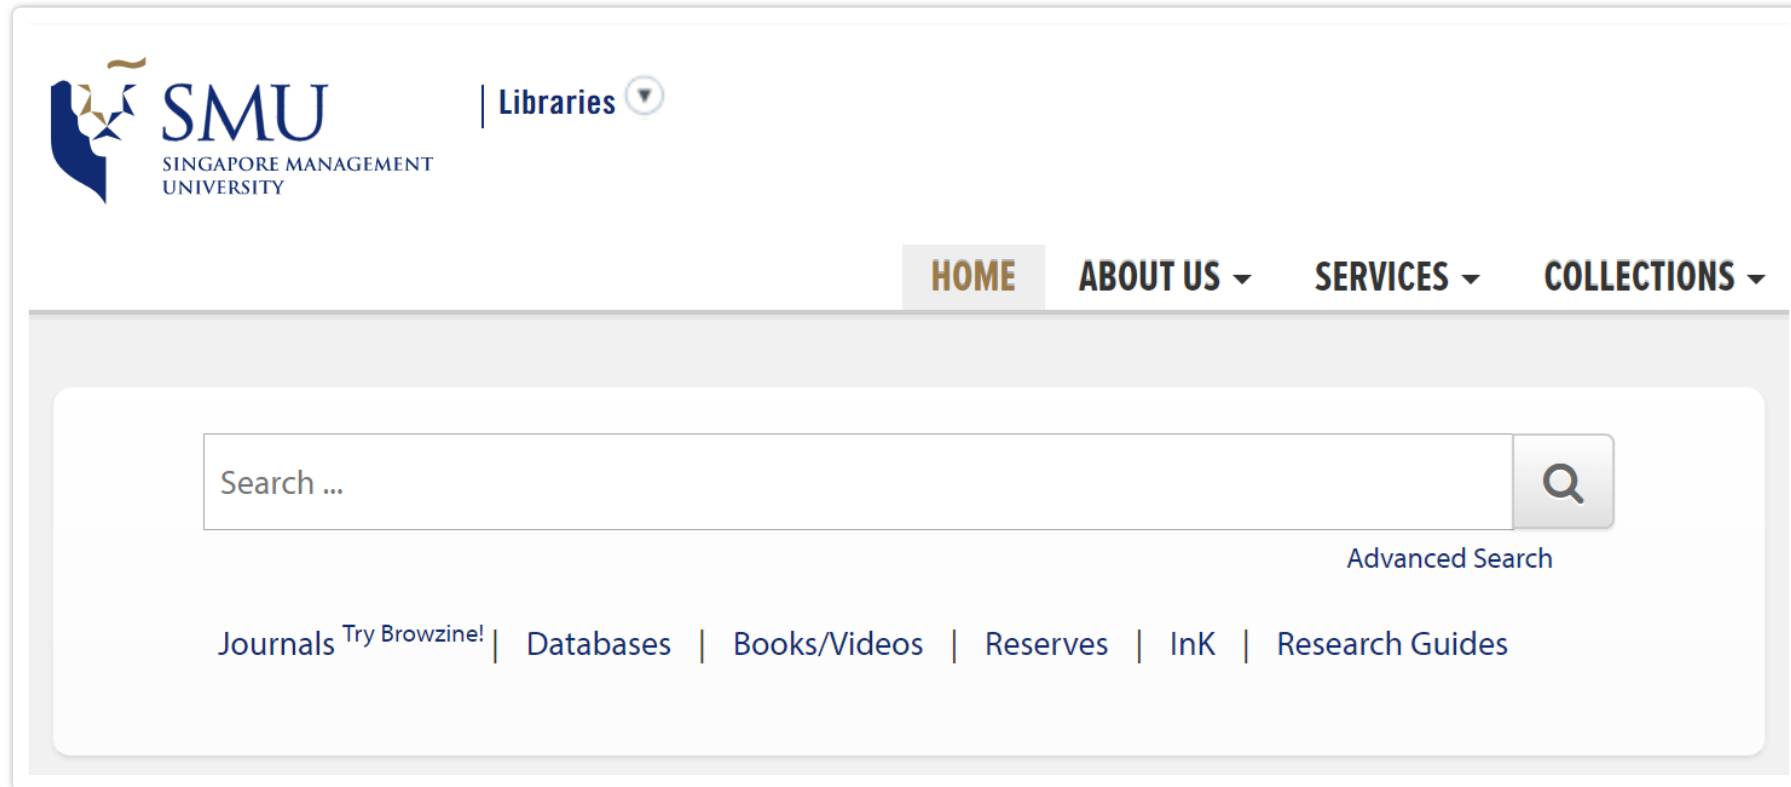

- Copy folder 'images' from the 02-resources.zip into a suitable folder in your WAMP's www folder.
- Create the page on the left using ``, `<a>`, and other tags.
 - Images' width = height = 100
- When clicked on the link MAX , The page will 'jump' to the Name field of Max.¹

Hint: Explore by yourself the use of `<h2>`, `<h3>`, `<p>`, and `
` tags

¹If the 'jump' is not observed, zoom the page

Form Tag

- Provides a means to make web pages interactive

The screenshot displays the SMU Libraries website interface. At the top left is the SMU logo (Singapore Management University) and a 'Libraries' dropdown menu. To the right is a navigation bar with links: 'HOME' (highlighted), 'ABOUT US', 'SERVICES', and 'COLLECTIONS'. Below the navigation bar is a large search bar with the placeholder text 'Search ...' and a magnifying glass icon. To the right of the search bar is a link to 'Advanced Search'. Below the search bar is a horizontal list of links: 'Journals Try Browzine!', 'Databases', 'Books/Videos', 'Reserves', 'InK', and 'Research Guides'.

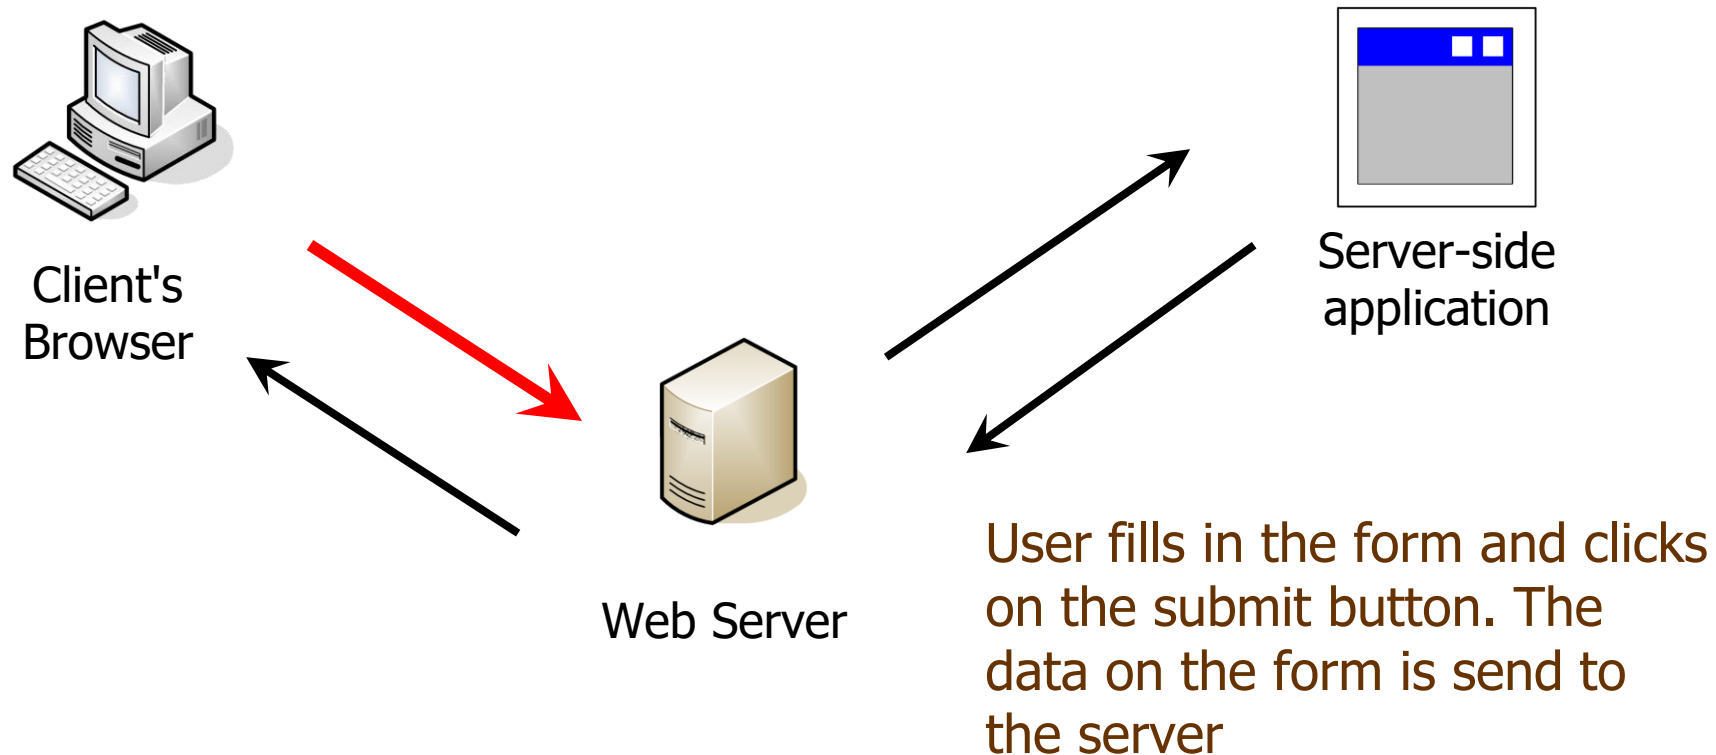

Form Tag

- Provides a means to make web pages interactive

Form Tag

- Provides a means to make web pages interactive

Form Tag

- Provides a means to make web pages interactive

Form Tag

- Provides a means to make web pages interactive

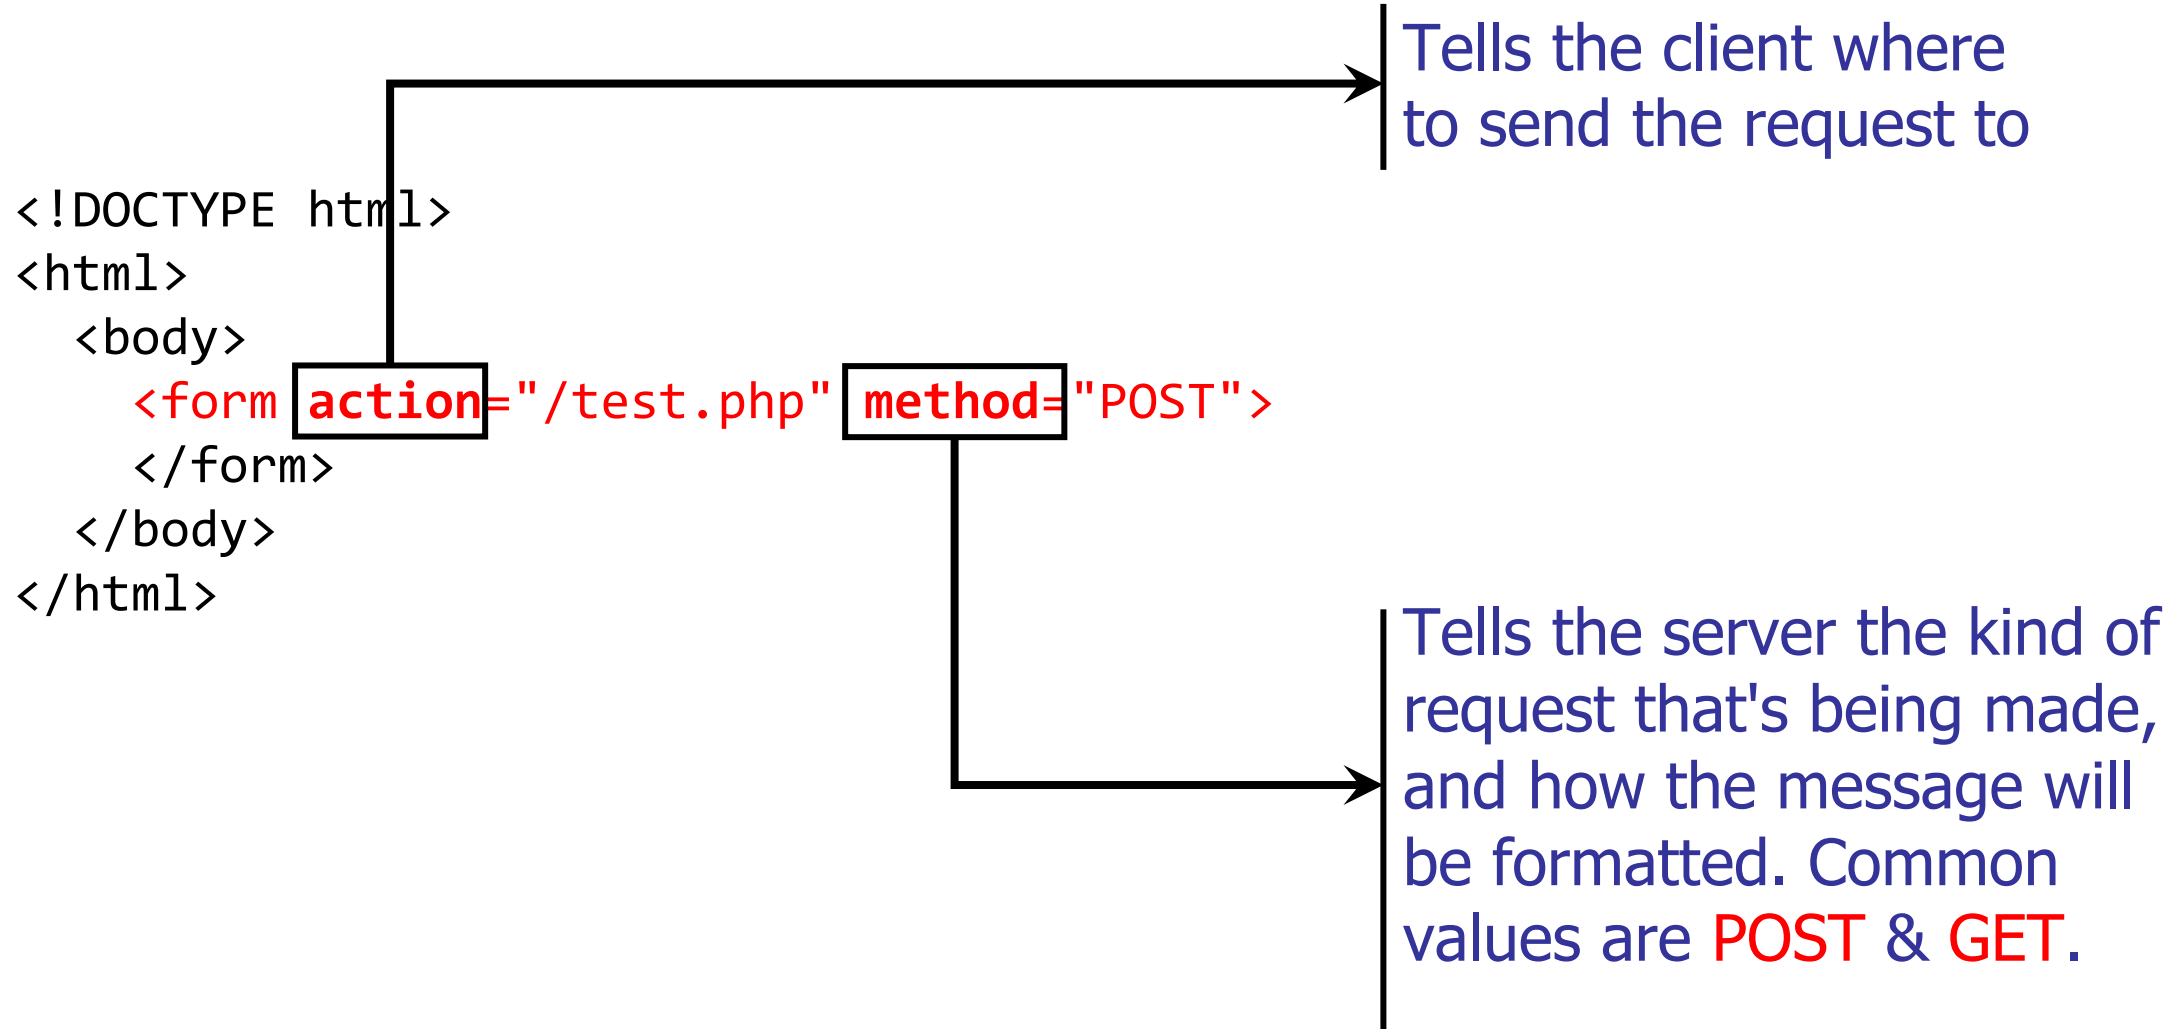

Form Tag

- Provides a means to make web pages interactive

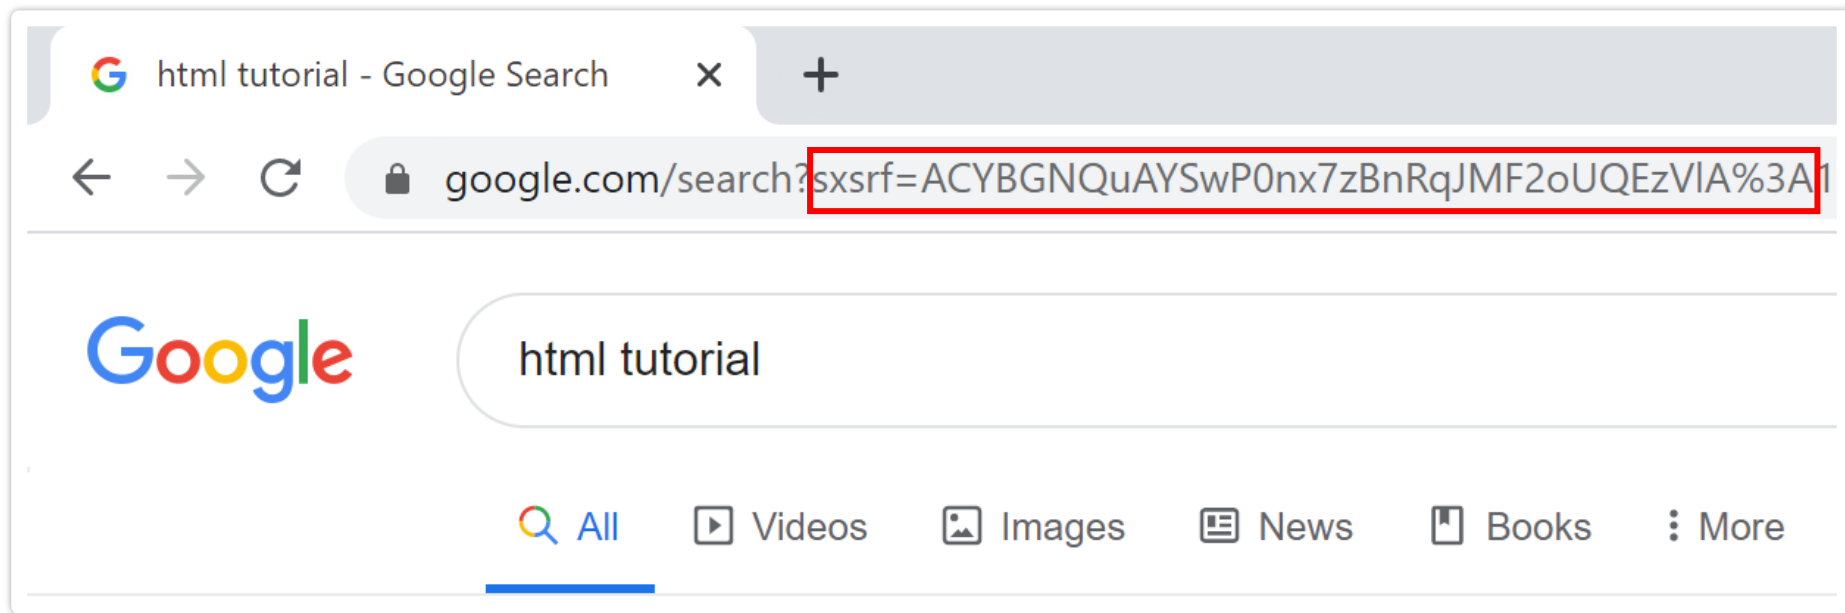

HTML Form Tag

Differences between HTTP GET and POST

- Data sent with the GET is appended to end of the URL up in the browser, so whatever you send is exposed.
- Can be bookmarked

Form Components

Text Field	<input type="text"/>
Submit Button	<input type="submit" value="Submit Query"/>
Reset Button	<input type="reset" value="Reset"/>
Checkbox	<input type="checkbox"/> Red
Radio Button	<input type="radio"/> Red

Password Field	<input type="password"/>
Hidden Field	<input type="hidden"/>
Dropdown List	<input type="text" value="red"/>
Text Area	<input type="text"/>
Label	123

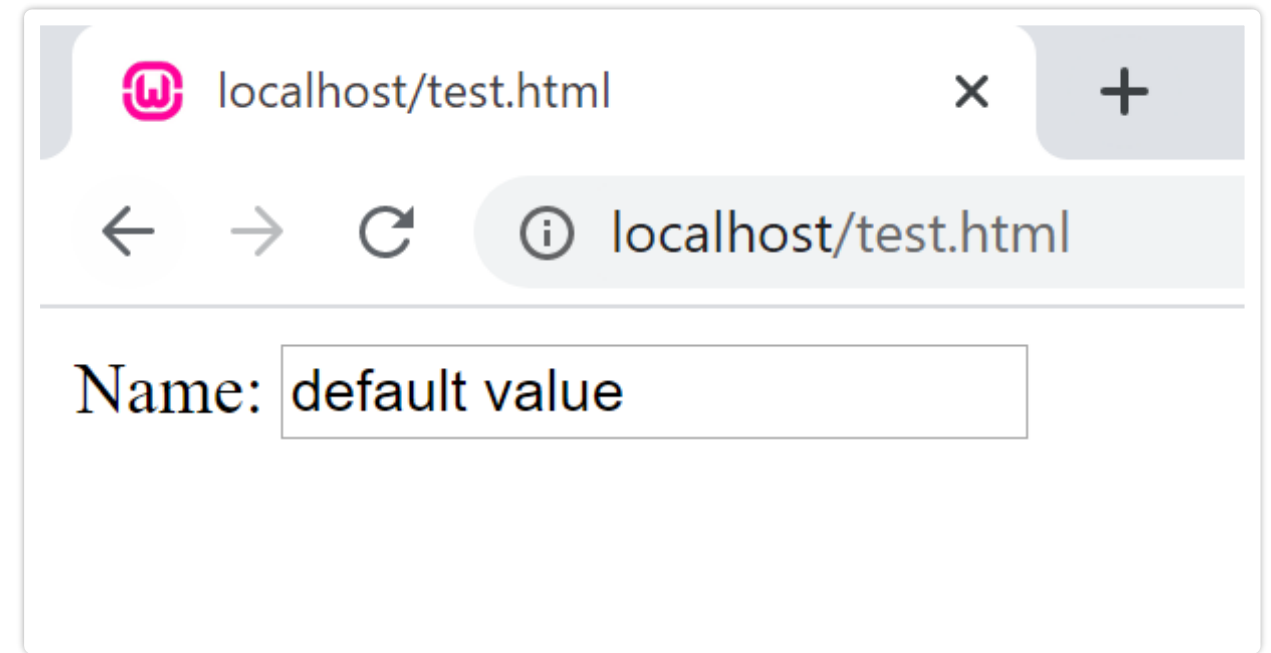

Text Field

- Allows the user to enter a single line of text.

```
<!DOCTYPE html>
<html>
  <body>
    <form>
      Name:
      <input type="text"
              name="aName"
              value="default value"
              size="20">
    </form>
  </body>
</html>
```

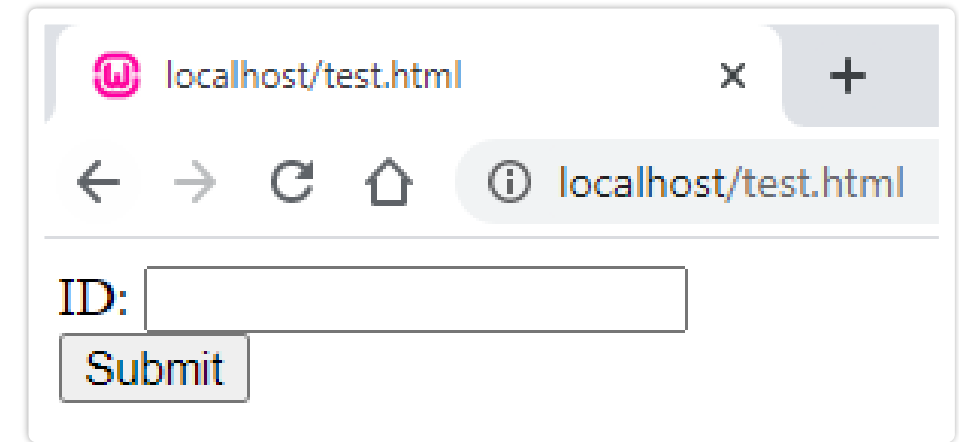

On-/offline documentation: <https://devdocs.io/html/element/input/text>

Submit Button

- Trigger the browser to send the information to the server.

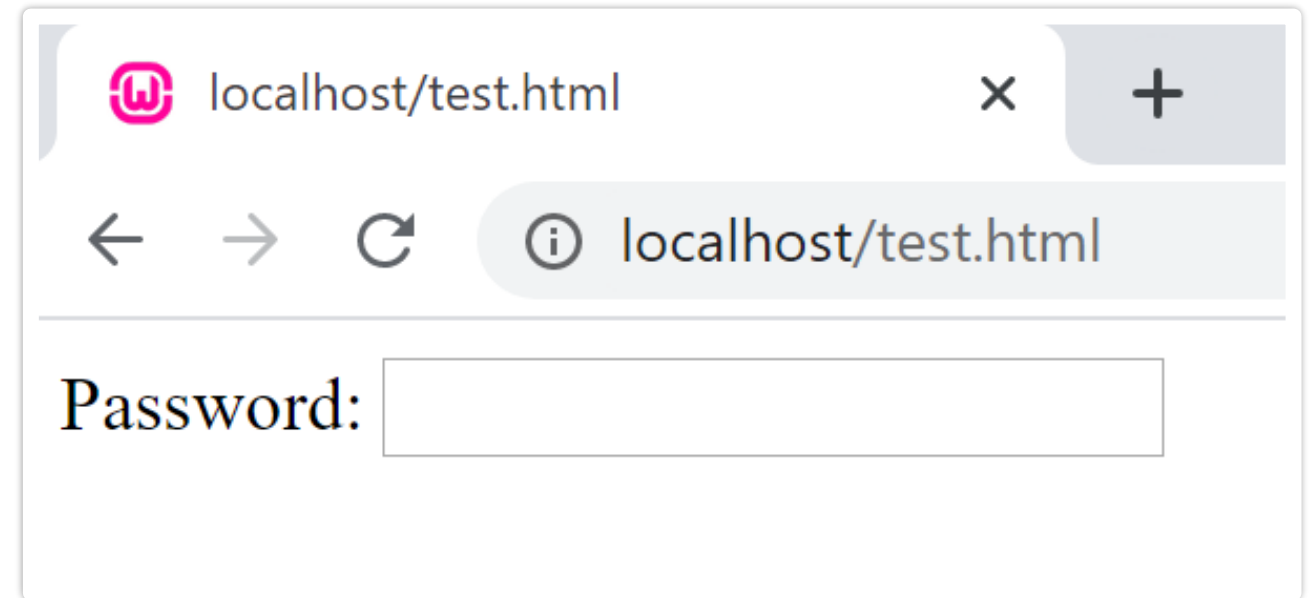

```
<!DOCTYPE html>
<html>
  <body>
    <form action="test.php">
      ID: <input type="text" name="id">
      <br>
      <input type="submit">
    </form>
  </body>
</html>
```

Password Field

- Allows the user to enter a single line of text.

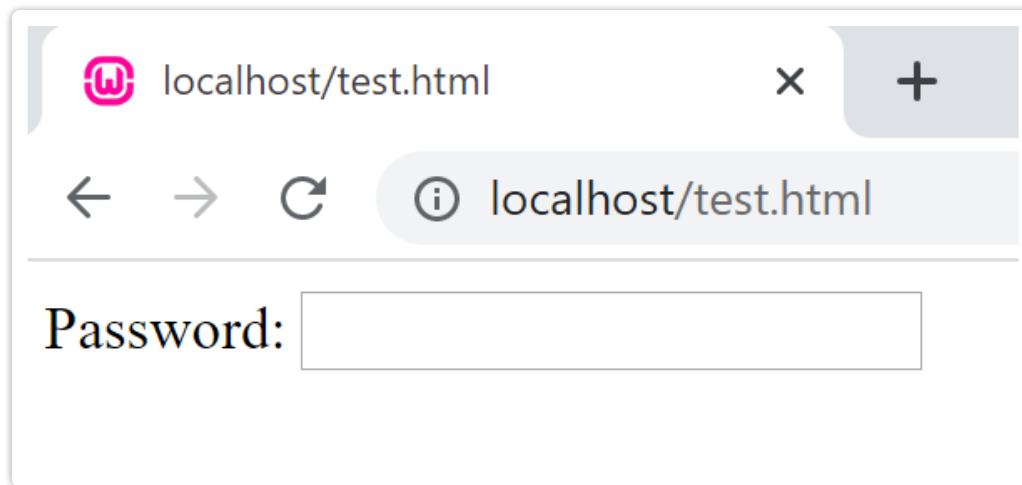

```
<!DOCTYPE html>
<html>
  <body>
    <form>
      Password:
      <input type="password"
            name="pwd"
            size="20">
    </form>
  </body>
</html>
```

Password Field

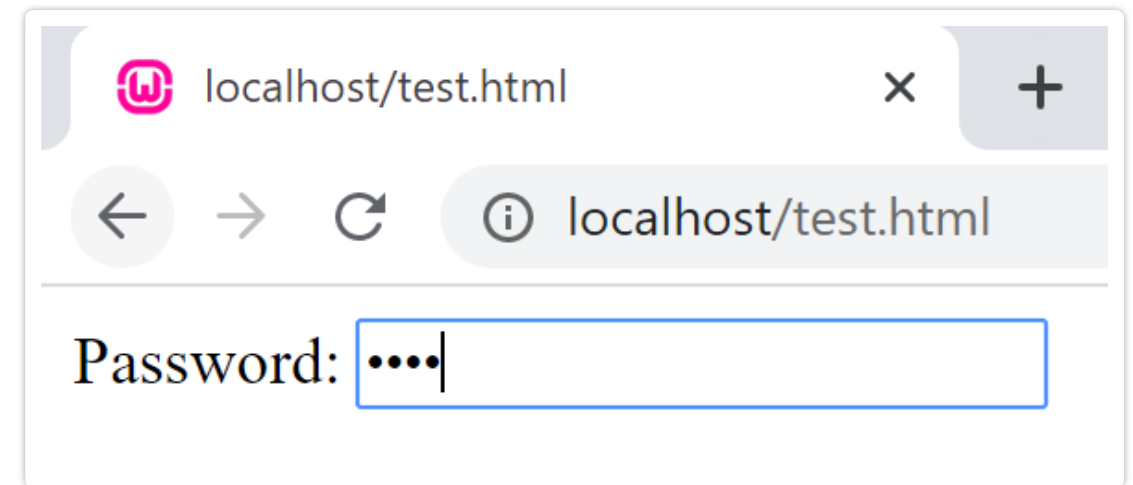

- Similar to a textfield, but the characters entered are obscured.

Before the characters
"password" is typed in

A web browser window with the address bar showing 'localhost/test.html'. Below the address bar, there is a label 'Password:' followed by an empty text input field.

After the characters
"password" is typed in

A web browser window with the address bar showing 'localhost/test.html'. Below the address bar, there is a label 'Password:' followed by a text input field containing three dots '...' and a vertical cursor line.

Radio Button

- A set of radio buttons with the name.
- When one is selected, the rest are automatically deselected

```
<!DOCTYPE html>
```

```
<html><body>
```

```
<form>
```

Your preferred Color:

```
<input name="color" type="radio" value="r" checked>Red
```

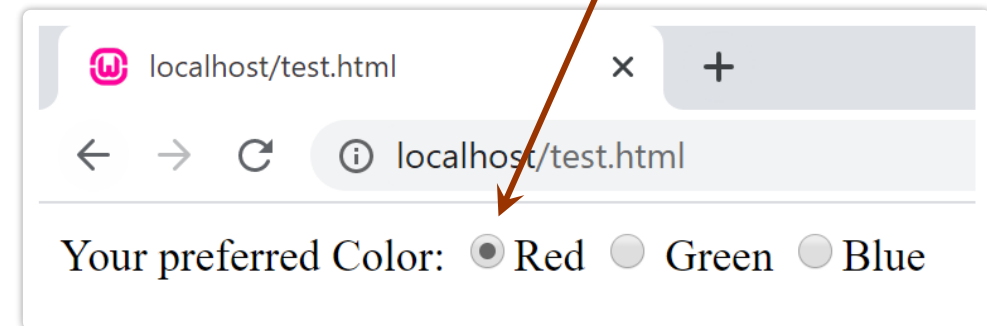

```
<input name="color" type="radio" value="g"> Green
```

```
<input name="color" type="radio" value="b">Blue
```

```
</form>
```

```
</body></html>
```

Radio buttons are associated by their name

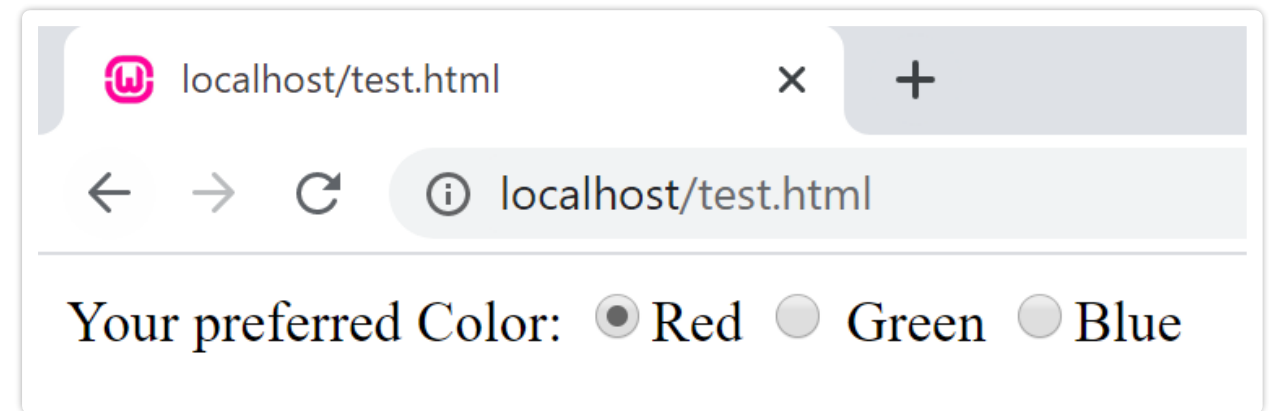

Label

- Associates a label with a form component

```
<!DOCTYPE html>
<html><body>
  <form>
    Your preferred Color:
    <input name="color" type="radio" value="r" checked>Red
    <input name="color" type="radio" value="g" id="color_g">
    <label for="color_g">Green</label>
    <input name="color" type="radio" value="b">Blue
  </form>
</body></html>
```

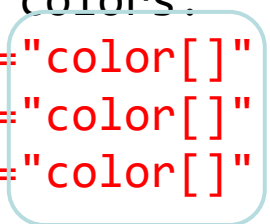

Click on the word "Red",
"Green" & "Blue". What
do you notice?

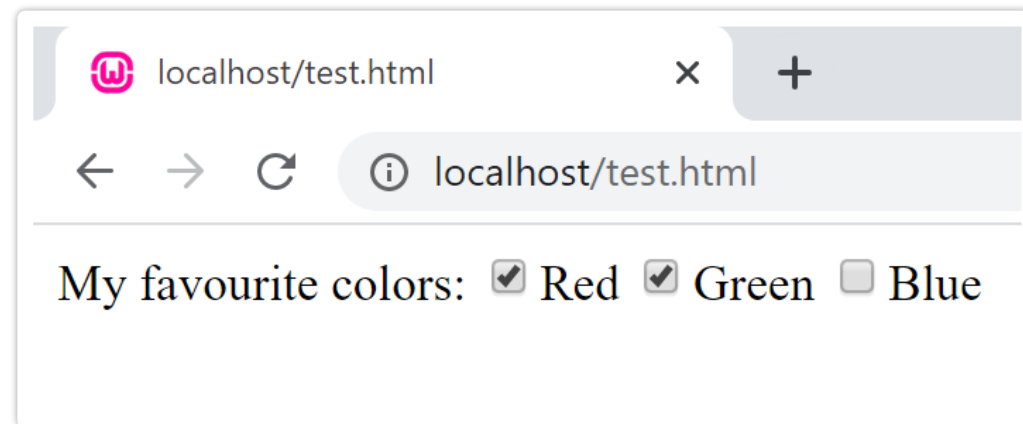

Checkbox

- The item it places on the page is a square and it is marked with a check when chosen.
- You can check as many as you like.

```
<!DOCTYPE html>
<html><body>
  <form>
    My favourite colors:
    <input name="color[]" type="checkbox" value="r" checked>Red
    <input name="color[]" type="checkbox" value="g" checked>Green
    <input name="color[]" type="checkbox" value="b">Blue
  </form>
</body></html>
```

If more than one possible value, always
use an array name

Exercise 3: Form - I

- Create a New User Registration Form as shown on the right.
- You have text input for First Name, Last Name, and Email. You have password input for password and radio buttons for Gender female and male.
- Next, they fill in their interest in games. Use check boxes for Mobile Games, PC Games Play Station and Xbox.
- Remember to create relevant Labels for each input and fill in the values for the radio buttons and checkboxes.

New User Registration

First Name:	<input type="text" value="Enter Your First Name"/>
Last Name:	<input type="text" value="Enter Your Last Name"/>
Email:	<input type="text" value="Enter Your Email"/>
Password:	<input type="password"/>
Gender:	<input type="radio"/> Female <input type="radio"/> Male

INTEREST

Please Check all that apply

- | | |
|---------------------------------------|-----------------------------------|
| <input type="checkbox"/> Mobile Games | <input type="checkbox"/> PC Games |
| <input type="checkbox"/> Play Station | <input type="checkbox"/> Xbox |

Hint: Explore by yourself the use of `<small></small>`, `<h1></h1>`, `<h4></h4>`, and ` `;

Text Area Component

- Unlike a text box that only allows one line, the text area allows as many lines as you wish.

```
<!DOCTYPE html>
```

```
<html>
```

```
<body>
```

```
<form>
```

Comment:

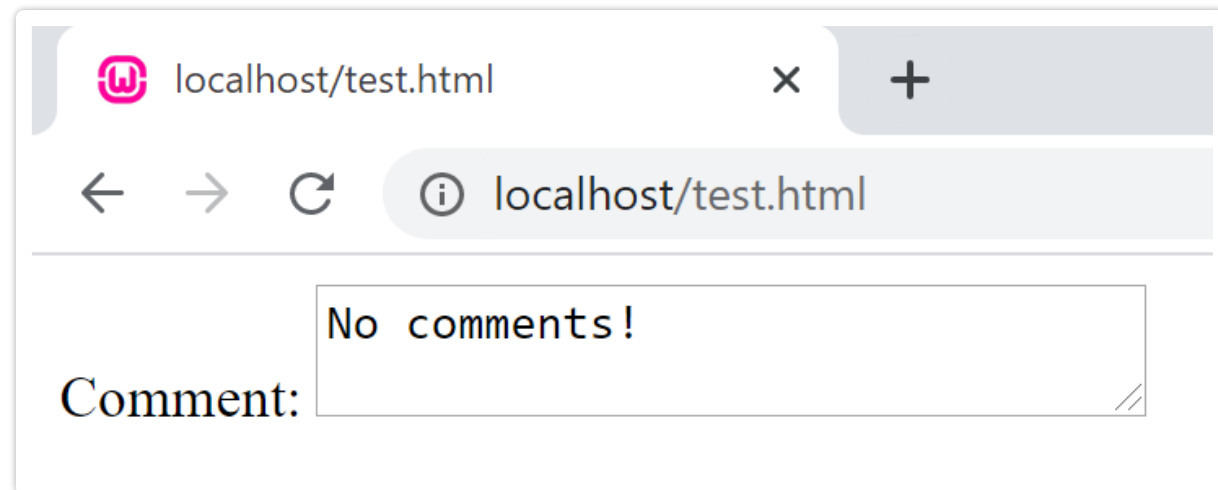

```
<textarea name="comment" rows="2" cols="30">No comments!  
</textarea>
```

```
</form>
```

```
</body>
```

```
</html>
```

Note: every character in-between the tag is included verbatim

localhost/test.html

localhost/test.html

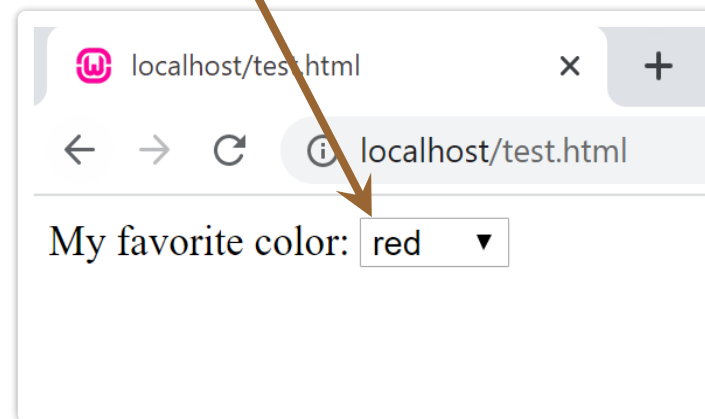

Comment: No comments!

Dropdown List

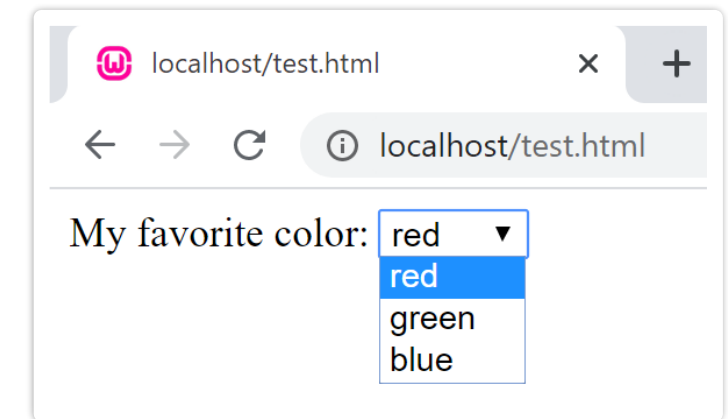

- Allows selection out of a specified list.

```
<!DOCTYPE html>
<html>
  <body>
    <form>
      My favorite color:
      <select name="color">
        <option value="R" selected>red</option>
        <option value="G">green</option>
        <option value="B">blue</option>
      </select>
    </form>
  </body>
</html>
```

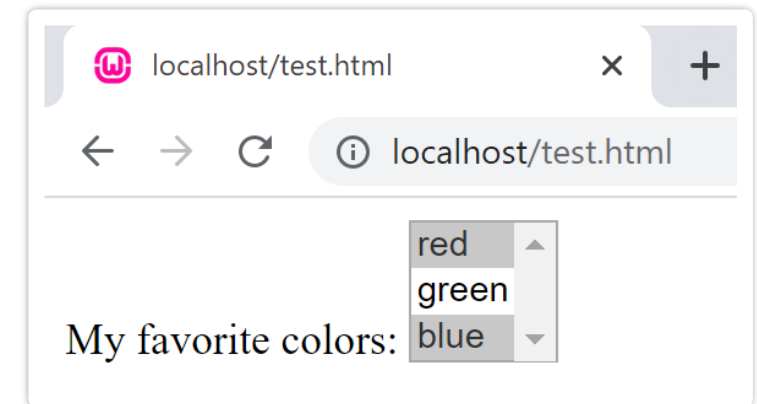

When clicked

Dropdown List

- **multiple** will allow more than one option to be selected.
- **size** attribute specifies the number of options that should be visible at a time.

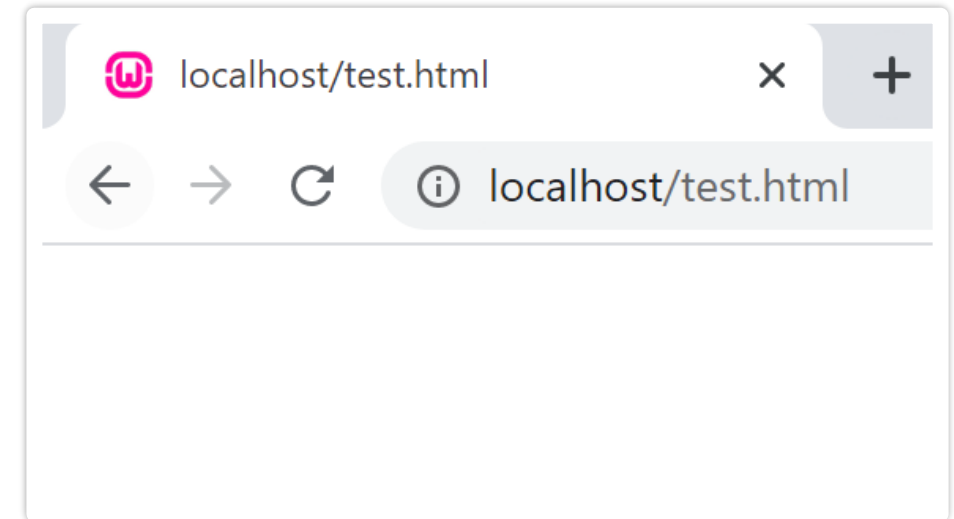

```
<!DOCTYPE html>
<html>
  <body>
    <form>
      My favorite colors:
      <select name="color[]" size="3" multiple>
        <option value="R" selected>red</option>
        <option value="G">green</option>
        <option value="B" selected>blue</option>
      </select>
    </form>
  </body>
</html>
```

Hidden Field

- To provide information that is not entered by the visitor.

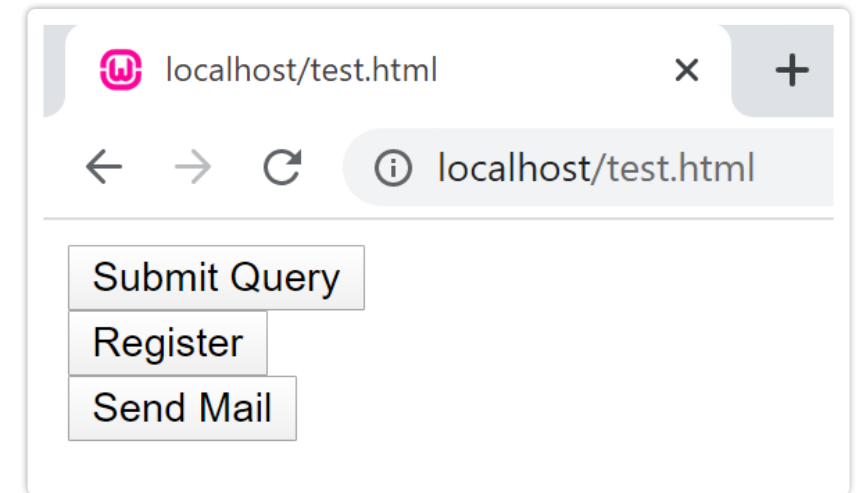

```
<!DOCTYPE html>
<html>
  <body>
    <form>
      <input type="hidden"
            name="language"
            value="english">
    </form>
  </body>
</html>
```

Submit Button

- Another example:

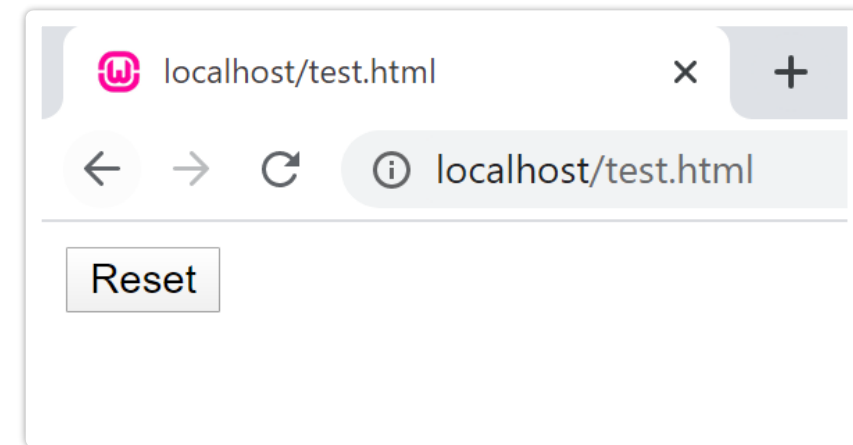

```
<!DOCTYPE html>
<html>
  <body>
    <form action="/test.php">
      <input type="submit" name="operation"
        value="Submit Query"><br>
      <input type="submit" name="operation"
        value="Register"><br>
      <input type="submit" name="operation"
        value="Send Mail"><br>
    </form>
  </body>
</html>
```

Reset Button

- It does not send any form data to the server.
- When selected, this button resets all the components in the HTML form to their default values.

```
<!DOCTYPE html>
<html>
  <body>
    <form action="/test.php">
      <input type="reset">
    </form>
  </body>
</html>
```

Exercise 4: Form - II

Customer Feedback Form

Title:

Name:

Type: ▼

Feedback

Comments

- Create a customer feedback form as shown on the left.
- You have text input for title and name. There is a dropdown list for the type of feedbacks.
- Type includes Inquiries, Feedback and Suggestions.
- Next you have a text area for customer to enter their comments.
- Remember to create relevant Labels for each input.
- Lastly create a reset input type and a submit input type.

Table

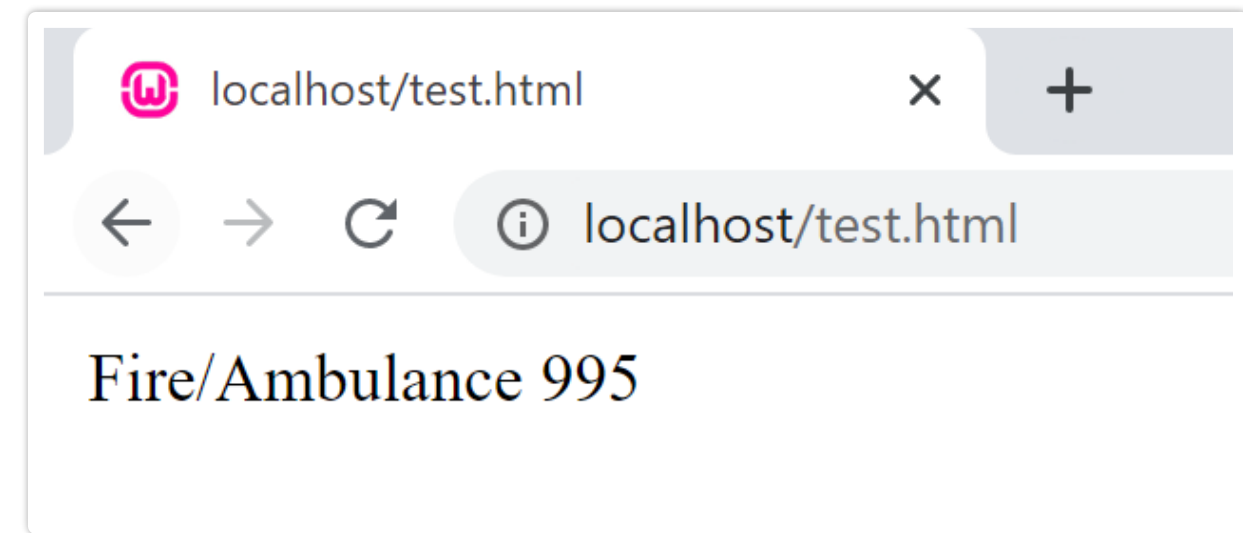

- Allows data to be arranged in rows and columns

<code><table></code>	Defines a table
<code><tr></tr></code>	Defines a new Table Row .
<code><th></th></code>	Used to create the titles of your table data (Table Header)
<code><td></td></code>	Denotes Table Data. Enclose your data within the tags.
<code></table></code>	Indicates the end of the table

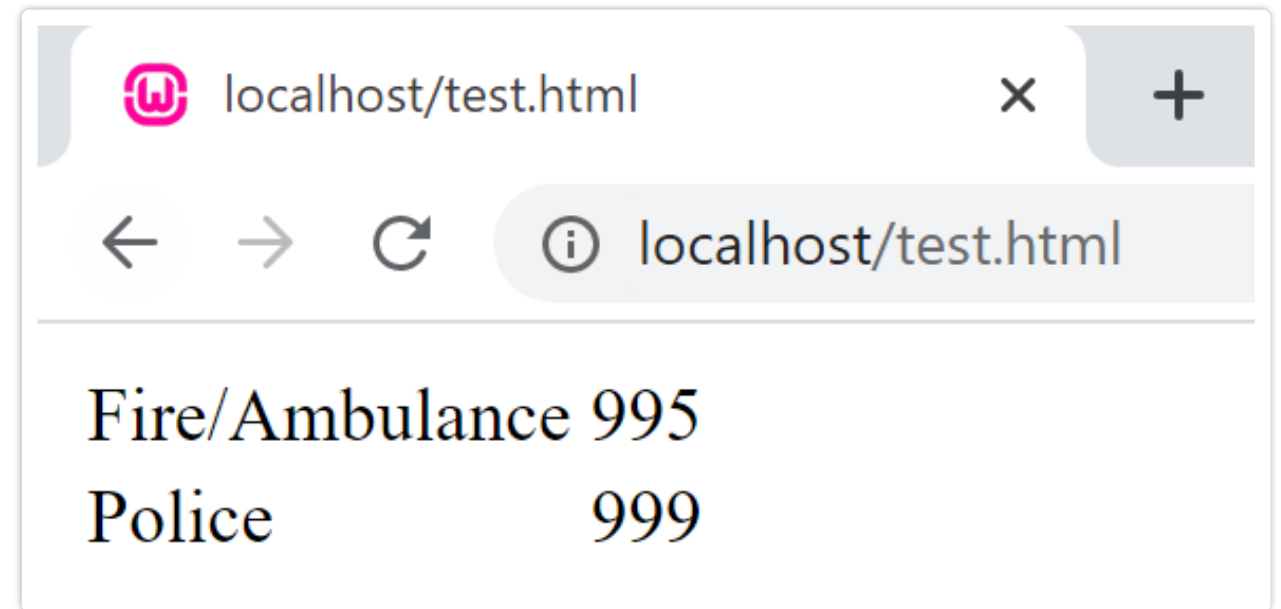

Table

```
<!DOCTYPE html>
<html>
  <body>
    <table>
      <tr>
        <td>Fire/Ambulance</td>
        <td>995</td>
      </tr>
    </table>
  </body>
</html>
```

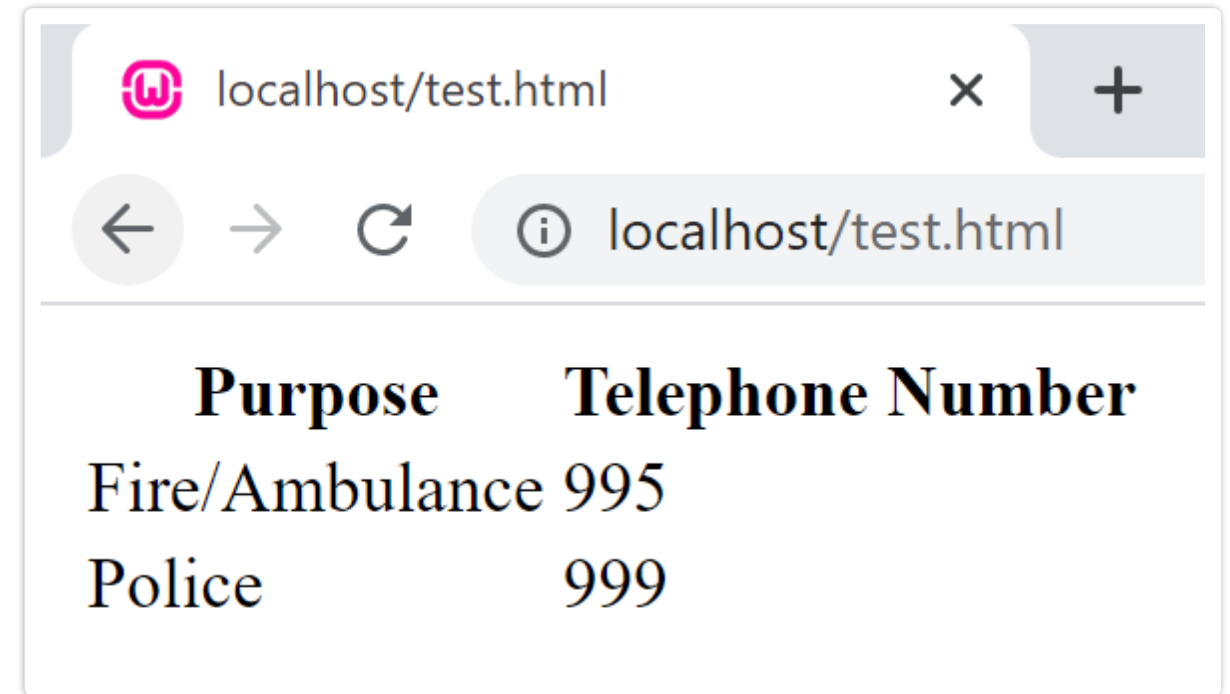

Table

```
<!DOCTYPE html>
<html>
  <body>
    <table>
      <tr>
        <td>Fire/Ambulance</td>
        <td>995</td>
      </tr>
      <tr>
        <td>Police</td>
        <td>999</td>
      </tr>
    </table>
  </body>
</html>
```

Table

```
<!DOCTYPE html>
<html>
  <body>
    <table>
      <tr>
        <th>Purpose</th>
        <th>Telephone Number</th>
      </tr>
      <tr>
        <td>Fire/Ambulance</td>
        <td>995</td>
      </tr>
      <tr>
        <td>Police</td>
        <td>999</td>
      </tr>
    </table>
  </body>
</html>
```

Exercise 5: Table

- Create a HTML page that contains your academic timetable. An example is shown below.

	8.30 - 10.00	10.15 - 11.45	12.00 - 1.30	1.45 - 3.15	3.30 - 5.00	5.15 - 6.45
Monday	IS 113					
Tuesday				IS 202		
Wednesday		MGMT 226				
Thursday					POSC 001	
Friday						

Exercise 5: Table

- **Hints:**

- Use the border attribute of `<table>` tag:

`<table border="1">`

or the following CSS (out of scope for WAD1):

```
<style>
  table{border: 1px solid black;}
  th,td{border: 1px solid black;}
</style>
```

- Explore by yourself the use of *colspan* attribute of `<td>`

References and Homework

- HTML Tutorial
 - <http://www.w3schools.com/html>
- More?
 - Type "html tutorial" in Google search engine

Key Points

- HTML

- Stands for Hyper Text Markup Language
- Tags mostly come in pair

- HTML Tags

- List: ``, ``
- Link: `<a>`
- Image: ``
- Form: `<form>`, `<input>`, `<select>`, `<option>`
- Table: `<table>`, `<tr>`, `<th>`, `<td>`
- Etc.
